Time Frame 10 minutes

Essential Question(s)

- Assist students in understanding the benefits of peer study groups.
- Guide students in the process of establishing and maintaining a study group with other students.

Summary

Week 10 of the Concurrent Enrollment Tool Kit is designed to assist you in explaining to students the benefits of studying in a group as well as best practices for creating a regular study group.

Learning Goals

Begin the meeting by greeting the student by name and inquiring about how their classes are going. Ask the student how they are feeling about their current stress level regarding their concurrent enrollment course(s).

Discuss some tips on how to form a study group such as:

- Determine a time and place to meet weekly and study for about 45 minutes each session.
- Choose someone to be the moderator and keep the study session on track. Moderators can rotate each session.
- Set expectations for the study group to follow such as not using phones or browsing social media during the session.
- Consider teaching each other the content needed to be studied during the study session.

Topic Focus

What are the benefits to forming a study group?

A student study group can provide support and improve content retention while also making learning more enjoyable. A study group can teach students new study skills, fill in learning gaps, and hold one another accountable to learning the content.

Discussion Starters

Consider starting the session by asking:

- Have you been a part of a study group before?
- Do you know how to set up a study group successfully?

Discussion Questions

To guide this week's discussion, consider asking some of the following questions:

- Is there a class you would like to study for more?
- Do you feel like you could benefit from studying with other students?
- Do you have other students in mind who might be interested in studying together?

Next Steps

To prepare for next week, ask students to:

- Consider reaching out to fellow students to start a study group.

Research Rationale

Research shows a clear and strong link between concurrent enrollment and increased student academic performance (Jones, 2014; Dingess, 2018). Several studies have also found that students who participate in concurrent enrollment have time to acclimate to the college environment and thus earn higher grades in their postsecondary careers (Allen & Dadgar, 2012; Dingess, 2018). This opportunity to build momentum also provides an avenue for those students who might carry complex social and educational challenges from high school as they transition into the university setting (Wang et al., 2015). A consistent concern with students as they transition from high school to PSE is that many of them might have difficulty in fully acclimating to the rigor and expectations of university-level coursework (Taylor, 2015; Vargas et al., 2017). This is especially apparent when looking at students who identify as first-generation college students, as they might feel overwhelmed by everything from student support to the specifics of financial aid (Lee et al., 2022). Concurrent enrollment offers a bridge between the familiarity of high school and the frontier of higher learning, building on the initial benefits of concurrent enrollment in high school to build toward greater academic momentum fueled by a smooth transition from high school to university (Wang et al., 2015).

To expand on the inherent benefits associated with concurrent enrollment programs, these programs are most successful when students are provided with extra guidance in how to navigate this new academic environment (Witkowsky & Clayton, 2020). Though students in concurrent enrollment programs might be high-performing, it is helpful to remember that they are still high school students and stand to benefit from “wraparound” services that counselors can provide as a bridge between high school and university-level expectations (Witkowsky & Clayton, 2020). Whether partnering directly with specific higher education institutions as part of the concurrent enrollment program or not, wraparound services can still be designed with the university course expectations in mind.

These tool kits are designed as conversation starters to provide the kind of ongoing support that allows concurrent enrollment students to be most successful (Johnson et al., 2021; Lile et al., 2018). Spanning a range of topics between goal setting and writing expectations, each conversation serves as an opportunity for relationship building and mentoring with students. For students who might not know which questions to ask or which resources to look for, these tool kits can help concurrent enrollment coordinators set a foundation for success for students to draw on after high school.
