Essential Question(s)

- What steps do I need to take to reach my future goals?
- How can I apply the career information to my current postsecondary plans and academic opportunities?

Summary

The College2Career Forum: OSU-OKC Fire Protection and Police Science programs focus on career exploration in firefighting and criminal justice while visiting a Post Secondary Institution (PSI) campus. Students will visit the respective program locations on the OSU-OKC campus to hear from professionals and instructors while engaging in hands-on activities related to their respective career fields. Students will also gain information regarding college applications, expenses, financial aid, and other important information.

Learning Goals

- Explore a PSI (OSU-OKC Fire Protection Pavilion and campus site).
- Connect career information to current academic opportunities and plans for postsecondary opportunities.
- Collaborate with career professionals while completing hands-on activities.

Materials

- Road Map to Success handout (attached; one per student)
- Visualize Your Career handout (attached; one per student)
- Name badges (optional)
- T-shirts (optional)
- Pen/Pencil
- Electronic devices (optional)
- Appropriate clothing for students (see Facilitator's Note in Explore)
- OSU-OKC Campus Map (linked; optional)

10 minutes

Engage

Facilitator Note: Disclaimer

The following description of what to expect from this OSU-OKC forum event reflects the common structure but may be subject to change based on availability and/or the professional(s) leading your event. For example, professional slide shows may change and/or activities may differ.

Prior to facilitating any forum event, see our [College2Career Forum: How to Guide](#) for more information on how to set up a specific forum.

Once you have arrived on site, be sure to check that your mode of transportation has the appropriate parking pass or availability as needed. Walk with your students to the site, and meet your career professional(s).

Before students hear from the professional(s), provide a brief welcome and overview of the day. This overview can include “housekeeping items” such as restroom location, where to store bags, and electronic device policies.

Next, have students use the [Fist to Five](#) strategy to gauge what they already know about the careers, institution, and/or degree field they will explore during this visit. Tell students to hold up:

- 0 fingers (a fist) if they know nothing at all
- 1 finger if they have a little understanding
- 2 fingers if they know something but need clarification
- 3 fingers if they have basic knowledge
- 4 fingers if they have an advanced understanding
- 5 fingers if they are an expert and can teach others

Have students share-out their prior knowledge if they are a 3 to 5 and things they want to learn if they are a 0 to 2. Repeat the sharing- out process as often as needed.

Once students have shared their experiences, move on to introducing the career professional(s).

Facilitator Note: Appropriate Clothing and Campus Map

Appropriate Clothing for Students: Due to the physical nature of some of the hands-on activities, we highly recommend you encourage students to wear closed-toed shoes and activewear clothing.

[Optional] See the **OSU-OKC Campus Map** by accessing their webpage here: <https://osuokc.edu/map>. For part 1 have your bus driver park in Lot L. Then, herd students to the “Pavilion” building. This is where the “Fire Protection” program is housed.

What to expect:

This section is divided into two parts: **Part 1** focuses on OSU-OKC’s Fire Protection program, while **Part 2** focuses on OSU-OKC’s Police Science program.

During **Part 1** students will arrive at the pavilion building which houses the OSU-OKC Fire Protection program. Students begin by actively listening to the program director about the academy and learning about the required training firefighters must complete. Additionally, academy students may be in attendance to demonstrate how to put on fire safety gear correctly and quickly as they would in a real emergency. The academy students may also show students how to use different tools such as axes, hoses, crowbars, “jaws of life,” an old fire truck, and more. Afterward, the students go through a timed obstacle course that helps simulate scenarios a firefighter may go through during a real-life example (minus the flames)!

Facilitator Note: Transportation Transition

Parts 1 and 2 of this forum are located in different areas of the OSU-OKC campus with major roads and train tracks separating the two programs. Your bus/van should stay ready to transport students after they have completed Part 1.

Refer to the Campus Map to locate where Part 2 is held. Have the bus driver park in Lot F. Then, herd students to the “Student Center” building which is where the “Police Science” program is showcased.

During **Part 2** students will hear from a professor of the Police Science program to learn real-world applications of the profession and the wide array of backgrounds and jobs that coincide with Police Safety. Students may engage in hands-on activities based on provided sample reports. These could include sketching a crime scene, dusting for fingerprints, writing crime scene reports, etc. Sometimes the professional may also take students to an intense simulation room where students are given real-world scenarios to react to.

Facilitator's Note: Possible Triggering Scenarios

If your professional decides to take students through this last simulation, it could be triggering for some students, as the scenarios include simulated violence that a police officer may encounter while out in the field. We recommend following whatever trauma-informed pedagogies or policies your school has in place.

Additionally, students will hear from OSU-OKC admissions at the conclusion of the Police Safety presentation. During this time they may learn about tuition costs, admissions process, campus life, and other aspects of OSU-OKC.

15 minutes

Explain

Facilitator Note: Student Engagement

As the chaperone, your main role through this section is classroom management and encouraging student questions and participation.

Have students use the instructional strategy [Think-Pair-Share](#) with someone who participated in a different aspect of the activity than they did. Students should turn and talk to their neighbors about the part of the activity they just engaged in. Students will also have the opportunity to ask questions about the degree program and/or career.

30 minutes

Extend

Usually, professionals give a recruiting pitch about how students can attend their PSI (i.e. cost, housing, scholarships, etc.) or pursue job opportunities (i.e. internships, “on the job training,” etc.) while students eat lunch. Provide a space for students to ask any clarifying questions.

If time and resources permit, pass out the attached Road Map to Success handout to each student. Direct them to the <https://www.mynextmove.org/> website or the K20 career clusters resource (<https://learn.k20center.ou.edu/search?type=student-resources>) and have them follow the directions on their handout to find what they need. Explain that they should complete the handout based on their individual searches. If students need help, encourage them to research careers similar to those of the presenting professional(s) or those within the same career cluster.

Facilitator Note: Road Map to Success Activity

If time does not permit, or students don't have electronic devices available, consider completing this activity upon returning to campus.

20 minutes

Evaluate

Upon returning to your campus and after participating in the College2Career Forum event, use the [Mirror, Microscope, and Binoculars](#) strategy to have students reflect on the experience. Pass out the attached **Visualize Your Career** handout to each student and allow them time to reflect on what they learned. Explain the following in as much detail as needed:

- **Mirror** (self reflection): *How do I feel about the career(s) I experienced today? Has this experience helped me think about what I want to do after high school?*
- **Microscope** (close inspection/details): *What are some of the smaller details of the career(s) I experienced today that I hadn't thought about before? How do my skills fit with this/these position(s)?*
- **Binoculars** (bigger picture): *Can I see myself in this career field later in life? How does this field play a role in the bigger world?*

Research Rationale

As research continues, it is becoming increasingly evident that simply telling students about PSI opportunities or career fields isn't enough. Teachers need to give students impactful, relatable, and engaging experiences so that they can actively explore these options. Not only do these experiences help students explore future opportunities, they can also lead to career success later in life. Research shows a strong correlation between career success later in life and job shadowing and workplace visits as a teen. One study found that Canadian students who made a workplace visit by age 15 were 4% less likely to be NEET (Not being in Education, Employment, or Training) than their peers at age 25 (Covacevich et al. 2021). The same study found that Korean students who made the same type of workplace visits were 1.23 times more likely not to be NEET than those who did not take a visit.

Work-Based Learning

In making college and career decisions, Work-Based Learning (WBL) opportunities can provide secondary students with experience, clarity, and increased self-efficacy. Field-based learning is a powerful tool in helping students to better understand the core concepts and to raise their enthusiasm (Janovy & Major, 2009; Manzanal et al., 1999, as cited in Pereira & Gheisari, 2017). These experiences also enable students to interact with professionals and perceive fieldwork in a way that is unattainable in a traditional school setting. A research project by Pereira and Gheisari (2017) studied faculty perceptions of the effectiveness of construction site visits during construction courses. The researchers found that faculty members believe observing the construction environment is critical for the students (Pereira & Gheisari, 2017). With student benefits and faculty acknowledgment, WBL can provide a compelling experience for students.

Another WBL study of eleven low-income, ethnic minority secondary students aimed to gauge the impact of a school's WBL program. Through data analysis of student interviews, the study revealed that the WBL program promoted hope for their future academic and career success as well as support and mentorship through workplace supervisors within the program (Medvide & Kennedy, 2020). This hope, support, and mentorship give students—especially low-income students whose backgrounds and lived experiences may hinder them—the self-efficacy to reach their full potential.

Hands-on Educational Experiences

Several research projects prove that hands-on educational experiences can positively impact students' academic and work-related outcomes. One such study followed a group of Australian secondary school students through a year-long science program. This program aimed to strengthen students' science skills in data analysis, experimentation, and scientific writing through current, hands-on research within the context of a significant worldwide health issue (Puslednik & Brennan, 2020). The research team found that the intervention reflected in students' mean score of knowledge growth—per a self-assessment survey—rose considerably. They also found, through VALID 10 testing, that 84% of intervention students would have scored lower on their tested science knowledge, problem-solving, communication, and planning skills than the control group's mean score (Puslednik & Brennan, 2020).

Another similar study evaluated the effectiveness of a hands-on learning experience in cancer research for 20 secondary students. After a two-week science summer camp at The University of the Pacific, researchers found that 83.33% of the students were interested in participating in another hands-on science learning experience, and the same number reported increased interest in attending The University of the Pacific as their Post Secondary Institution (PSI) (Argueta et al, 2020). These results showcased the impact and importance of hands-on learning for high school-aged students when considering their future academic and career endeavors.
