## Essential Question(s)

- What steps do I need to take to reach my future goals?
- How can I apply the career information to my current post-secondary plans and academic opportunities?

## Summary

The OU College of Social Work College2Career Forum explores different career pathways and education available to students in the Human Services career cluster. Participants will explore OU's College of Social Work and speak with professors, professionals, and current students about the field. Additionally, participants will engage in real-world simulations, learn about the plethora of jobs available in Social Services, and plan for post-secondary opportunities.

## Learning Goals

- Explore a PSI (OU's College of Social Work)
- Connect career information to current academic opportunities and plans for post-secondary opportunities
- Collaborate with career professionals while completing hands-on activities

## Attachments

## Materials

- Road Map to Success handout (attached; one per student)
- Visualize Your Career handout (attached; one per student)
- Name badges (optional)
- T-shirts (optional)
- Pens/pencils
- Electronic devices (optional)

10 minutes

## Engage

### Facilitator Note: Disclaimer

The following description of what to expect from this OU College of Social Work forum event reflects the common structure but may be subject to change based on availability and/or the professional(s) leading your event. For example, professional slide shows may change and/or activities may differ.

Prior to facilitating any forum event, see our [College2Career Forum: How to Guide](#) for more information on how to set up a specific forum.

Once you have arrived on site, be sure to check that your mode of transportation has the appropriate parking pass or availability as needed. Walk with your students to the site, and meet your career professional(s).

Before students hear from the professional(s), provide a brief welcome and overview of the day. This overview can include “housekeeping items” such as restroom location, where to store bags, and electronic device policies.

Next, have students use the [Fist to Five](#) strategy to gauge what they already know about the careers, institution, and/or degree field they will explore during this visit. Tell students to hold up:

- 0 fingers (a fist) if they know nothing at all
- 1 finger if they have a little understanding
- 2 fingers if they know something but need clarification
- 3 fingers if they have basic knowledge
- 4 fingers if they have an advanced understanding
- 5 fingers if they are an expert and can teach others

Have students share out their prior knowledge if they are a 3 to 5 and things they want to learn if they are a 0 to 2. Repeat the sharing-out process as often as needed.

Once students have shared their experiences, move on to introducing the career professional(s).

90 minutes

## Explore

### What to expect:

The OU College of Social Work event begins in a meeting room on the first floor of the building. Here, students will receive a brief introduction to the event before taking part in an icebreaker activity. Then, students will get an overview of the different careers and pathways in social work and learn more about the college from one of the directors of the program. Students can ask questions and interact as they learn more about the field of social work. After the presentation, students take a tour of the building. The tour stops on the second floor, where a panel of current senior and graduate students at the college hold a Q&A with students about their coursework, career plans, and experiences in the program.

After the tour and panel, students have an opportunity to engage in faculty-directed simulations of different aspects of social work. The staff has multiple simulations, so you may speak with them before your trip to decide which would be best for your students. Some of the simulation topics include elderly care, empathy training, and poverty.

### Facilitator Note: Simulation Experience

OU's College of Social Work's simulation experiences are highly engaging and impactful. However, be sure to consider your students and their backgrounds as you plan your event to tailor the simulation to your students' sensitivities. For example, if your students come from a low-income background, the poverty simulation may hit too close to home for some of them.

Students are then taken back to the room they began the day in to hear from an OU admissions spokesperson about applying for school, costs, financial aid, housing, etc. You may have students eat lunch at this time, as well. The OU College of Social Work staff will be available at this time to answer any questions students may have about the college, program, and profession.

15 minutes

## Explain

**What to expect:**

Have students use the instructional strategy [Think-Pair-Share](#) with someone who participated in a different aspect of the activity than they did. Students should turn and talk to their neighbors about the part of the activity they just engaged in. Students will also have the opportunity to ask questions about the degree program and/or career.

**Facilitator Note: Student Engagement**

As the chaperone, your main role through this section is classroom management and encouraging student questions and participation.

20 minutes

## Extend

Usually, professionals give a recruiting pitch about how students can attend their PSI (i.e. cost, housing, scholarships, etc.) or pursue job opportunities (i.e. internships, “on the job training,” etc.) while students eat lunch. Provide a space for students to ask any clarifying questions.

If time and resources permit, pass out the attached **Road Map to Success** handout to each student. Direct them to the <https://www.mynextmove.org/> website or the K20 career clusters resource (<https://learn.k20center.ou.edu/search?type=student-resources>) and have them follow the directions on their handout to find what they need. Explain that they should complete the handout based on their individual searches. If students need help, encourage them to research careers similar to those of the presenting professional(s) or those within the same career cluster.

### Facilitator Note: Road Map to Success Activity

If time does not permit, or students don't have electronic devices available, consider completing this activity upon returning to campus.

20 minutes

## Evaluate

Upon returning to your campus and after participating in the College2Career Forum event, use the [Mirror, Microscope, and Binoculars](#) strategy to have students reflect on the experience. Pass out the attached **Visualize Your Career** handout to each student and allow them time to reflect on what they learned. Explain the following in as much detail as needed:

- **Mirror** (self reflection): *How do I feel about the career(s) I experienced today? Has this experience helped me think about what I want to do after high school?*
- **Microscope** (close inspection/details): *What are some of the smaller details of the career(s) I experienced today that I hadn't thought about before? How do my skills fit with this/these position(s)?*
- **Binoculars** (bigger picture): *Can I see myself in this career field later in life? How does this field play a role in the bigger world?*

# Research Rationale

As research continues, it is becoming increasingly evident that simply telling students about PSI opportunities or career fields isn't enough. Teachers need to give students impactful, relatable, and engaging experiences so that they can actively explore these options. Not only do these experiences help students explore future opportunities, they can also lead to career success later in life. Research shows a strong correlation between career success later in life and job shadowing and workplace visits as a teen. One study found that Canadian students who made a workplace visit by age 15 were 4% less likely to be NEET (Not being in Education, Employment, or Training) than their peers at age 25 (Covacevich et al. 2021). The same study found that Korean students who made the same type of workplace visits were 1.23 times more likely not to be NEET than those who did not take a visit.

## Work-Based Learning

In making college and career decisions Work-Based Learning (WBL) opportunities can provide secondary students with experience, clarity, and increased self-efficacy. Field-based learning is a powerful tool in helping students to better understand the core concepts and to raise their enthusiasm (Janovy & Major, 2009; Manzanal et al., 1999, as cited in Pereira & Gheisari, 2017). These experiences also enable students to interact with professionals and perceive fieldwork in a way that is unattainable in a traditional school setting. A research project by Pereira and Gheisari (2017) studied faculty perceptions of the effectiveness of construction site visits during construction courses. The researchers found that faculty members believe observing the construction environment is critical for the students (Pereira & Gheisari, 2017). With student benefits and faculty acknowledgment, WBL can provide a compelling experience for students.

Another WBL study of eleven low-income ethnic minority secondary students aimed to gauge the impact of a school's WBL program. Through data analysis of student interviews, the study revealed that the WBL program promoted hope for their future academic and career success as well as support and mentorship through workplace supervisors within the program (Medvide et al.; M. E., 2020). This hope, support, and mentorship give students—especially low-income students whose backgrounds and lived experiences may hinder them—the self-efficacy to reach their full potential.

## Hands-on Educational Experiences

Several research projects prove that hands-on educational experiences can positively impact students' academic and work-related outcomes. One such study followed a group of Australian secondary school students through a year-long science program. This program aimed to strengthen students' science skills in data analysis, experimentation, and scientific writing through current, hands-on research within the context of a significant worldwide health issue (Puslednik & Brennan, 2020). The research team found that the intervention reflected in students' mean score of knowledge growth—per a self-assessment survey—rose considerably. They also found, through VALID 10 testing, that 84% of intervention students would have scored lower on their tested science knowledge, problem-solving, communication, and planning skills than the control group's mean score (Puslednik & Brennan, 2020).

Another similar study evaluated the effectiveness of a hands-on learning experience in cancer research for 20 secondary students. After a two-week science summer camp at The University of the Pacific, the researcher found that 83.33% of the students were interested in participating in another hands-on science learning experience, and the same number reported increased interest in attending The University of the Pacific as their Post-Secondary Institution (PSI) (Argueta et al, 2020). These results showcased the impact and importance of hands-on learning for high school-aged students when considering their future academic and career endeavors.
