

# Primary Sources for Primary Grades

## Comparing and Contrasting Today's Classrooms with Classrooms from the Past

<b>Grade Level</b>	1st Grade	<b>Time Frame</b>	3-4 class periods
<b>Subject</b>	Social Studies		

### Essential Question

How do clues from pictures help us understand the lives of people in the past and present? How were schools different in the past, and why have they changed over time?

### Summary

Students will explore and explain how primary sources can help us learn about history. The class will use photos from approximately 100 years ago to discover how past classrooms compare with today's classrooms. Students will then explore possibilities for future classrooms and draw their vision of how they think students will learn 100 years from now.

### Snapshot

#### Engage

Students create an anchor chart together as they discuss what helps make learning happen in their classroom.

#### Explore

Using primary source photos of classrooms from approximately 100 years ago, students use the Collective Brain Dump strategy to compare and contrast classrooms from today and the past.

#### Explain

During a class discussion, students share with partners what they learned from viewing pictures of schools from long ago and pictures of today's classrooms. They collaboratively create a Venn diagram capturing these comparisons. Pertinent vocabulary is introduced and added to the class word wall or chart.

#### Extend

Students draw a picture or diagram showing what tools students and teachers will use in future classrooms.

#### Evaluate

Using the Triangle-Square-Circle strategy, students answer questions about schools in the past, present, and future.

## Standards

*Oklahoma Academic Standards (Social Studies Practices PK-12)*

**1.3.4:** Identify primary sources and how they help us to learn about the past.

*Oklahoma Academic Standards (Social Studies Practices PK-12)*

**3A:** Students will develop skills and practices which demonstrate an understanding that historical inquiry is based on the analysis and evaluation of evidence and its credibility.

**4B:** Students will apply critical reading and thinking skills to interpret, evaluate, and respond to a variety of complex texts from historical, ethnic, and global perspectives.

## Materials

- Lesson Slides (attached)
- Pictures of Classrooms in the Past (attached)
- Pictures of Classrooms in the Present (attached)
- School of the Future handout (attached; one per student)
- Anchor chart paper

## Engage

Start by asking students to think about what items in their classroom help make learning happen. Have them turn and talk with a partner to share their ideas. Then have a whole class discussion and create a class [anchor chart](#) to record students' answers. If needed, guide students by asking them to think about specific tools they use every day.

### Sample Student Responses

Possible student responses might include pencils, books, tables, chairs, smartboard, computers, iPads, crayons, etc. Below is a sample anchor chart. Be sure to post this anchor chart so students can reference it throughout the lesson.

# Explore

Display **slide 3** of the attached **Lesson Slides**, and ask students to think about these essential questions:

- How do clues from pictures help us understand the lives of people in the past and present?
- How were schools different in the past, and why have they changed over time?

Display **slide 4**, and explain how photos of classrooms from the past are examples of primary sources. Then introduce to students the old classroom photos on **slides 5–8**. You also can print out the attached **Pictures of Classrooms in the Past** and have students pass the pictures around.

You may also want to show students the websites where the photos were retrieved (or you can wait and do this later in the lesson if it will distract your students from the content at this time). Display **slide 9**, and ask students to continue thinking about the essential questions introduced earlier in the lesson.

Have students share their ideas with an [Elbow Partner](#) or in small groups. When groups are finished sharing with one another, introduce the class to the [Collective Brain Dump](#) strategy. Have each group share their knowledge with the whole class in a Collective Brain Dump.

As the class shares out, record their ideas on a whiteboard space or on chart paper to create a whole-class product.

## Sample Student Responses

Possible student responses could include that there is no smartboard (in some photos there is a blackboard), the desks and chairs look different, in one photo there is a piano, there are pictures on the walls, etc.

# Explain

Show the class a few typical first- or second-grade classroom pictures from the present day. You can use the pictures provided on **slides 10–13** or take your own. You also can print out the attached **Pictures of Classrooms in the Present** and have students pass the pictures around.

Next, introduce students to the [Partner Speaks](#) strategy, which helps students practice active listening, and gives voice to students who might otherwise not share their thoughts.

Invite students to participate in a Partner Speaks activity. During this activity, students should work in pairs to share what they learned about past and present schools from the pictures. *The anchor chart, vocabulary list, and pictures from the previous sections of the lesson should be visually accessible so that students can use them as prompts if needed.*

After students have had enough time to share with their partner, gather the class together and display **slide 14**. Explain what a Venn diagram is, and tell students that they will create one as a class to compare and contrast things that are different and the same in today's schools and those of the past.

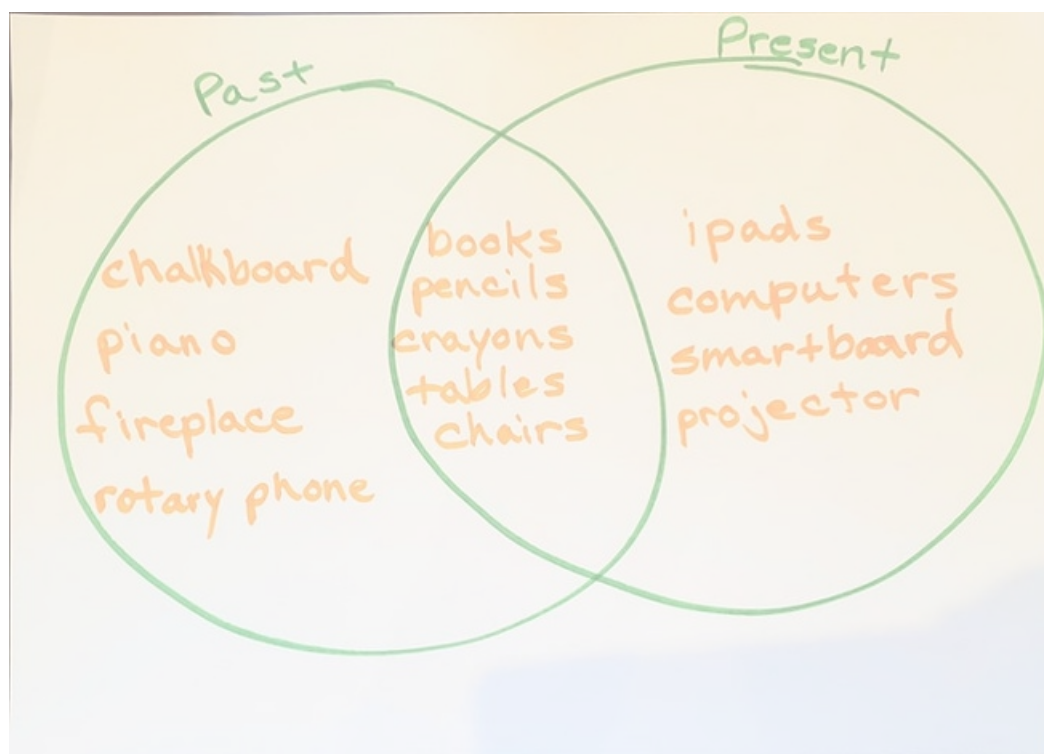

Create a large Venn diagram on poster paper or a whiteboard space. Have students take turns as each pair shares one thing their partner told them, rather than their own ideas, with the whole class. As each pair shares, have the class decide where you will write it on the Venn diagram. If attention wanes as the discussion happens, take a break and come back to it.

## Teacher's Note: Vocabulary

Use vocabulary words to help students understand and explain how they are comparing and contrasting different photos and time periods. You may want to add these words to your anchor chart, Collective Brain Dump, word chart, word wall, etc. if they are not there already.

**Vocabulary:** Differences, similarities, compare, contrast, past, present, future, supplies, tools, photos, primary sources, etc.

Below is a rough draft of a sample Venn diagram. More details can and should be added to the whole-class product as each pair shares.

### Possible Discussion Questions

The following questions can be used to help guide further discussion:

- How different does this classroom look from our own?
- What do you think it would be like to learn in that kind of classroom?
- What tools and supplies do you think students used to learn 100 years ago?

## Extend

Display **slide 15**, and pose this question to the class: *What will classrooms look like 100 years from now?*

Pass out the attached **School of the Future** handout, and have each student draw a picture or diagram showing what tools students and teachers will use 100 years from now to help them learn.

Interview students about what they are drawing and writing, and help students to write captions or titles for their pictures.

### **Teacher's Note: Inspiring Creativity**

This is a chance for students to use their creativity. If students struggle with this at first, have them think back to the previous activities. Then have them visualize or make a list of items students use today and list any changes to those items that students think could be possible in the future.

Examples could include: pencils that never need sharpening or never break, teleporting outside for recess, ordering lunch on a computer and having it appear instantly, etc.

# Evaluate

Display **slide 16**, and have students use the [Triangle-Square-Circle](#) strategy to draw or write their responses to the following questions:

**Triangle:** How were schools different in the past?

**Square:** Why have schools changed over time?

**Circle:** What do you still wonder about these changes? What questions do you have?

## Teacher's Note: Responding to Student Needs

The shapes can either be drawn or traced by the students, or you can print the shapes out on sheets ahead of time to provide students with another option. You may need to do this activity in a small group setting so that you can assist students in putting their thoughts to paper.

Display **slide 17**, and use students' responses to the Triangle-Square-Circle activity to revisit this lesson's essential questions:

- How do clues from pictures help us understand the lives of people in the past and present?
- How were schools different in the past, and why have they changed over time?

Bring the class together and have a class discussion, asking the following:

- Have we answered our essential questions?
- How did we do this?
- Did using primary sources help us to find the information we needed?
- Do you think using primary sources is a good way to learn about the past and present?
- How could we find the answers to the questions you wrote on your circles?
