Directions: Simplify the polynomials using the method of your choice.

Add $(x^4 + 6x^3 - x^2 + 5) + (3x^4 - 2x^2 - 3x + 7)$	Subtract $2x^4 - 7x^2 - x + 9$ from $8x^4 - 6x^3 + 2$.
--	--

What seems most important about using addition and subtraction to simplify polynomials?
What are you sure you misunderstand? What is the source of the confusion?
