SUMS OF JUMANJI RECORDING SHEET

Roll two dice 15 times. For each roll, track sum by recording the value shown on the dice (ex: roll number one are 3 and 2. Record 3+2 under the column labeled "5").

Roll	Sum										
Number	2	3	4	5	6	7	8	9	10	11	12
1											
2											
3											
4											
5											
6											
7											
8											
9											
10											
11											
12											
13											
14											
15											

1.	What might happen to the results if we continued to roll the dice another 10 times, 15 times, 100 times, etc? What would you expect to happen to the sums?
2.	If we rolled the dice <u>15</u> more times, how many times would you expect to get a sum that equals? (Choose 3 sums to respond)
3.	If we had rolled the dice only 5 times, how many times would you expect to have received a sum that equals? (Choose 3 sums to respond)

Using the following scenarios, make predictions based on your data.
