

DO INK GREEN SCREEN APP SCAVENGER HUNT

Task	Complete?
Open the Do Ink green screen app.	
Tap the “+” button in the upper right corner of the screen to create a new project.	
Locate the layers on the timeline. These layers work like layers in other software programs (for example, the functions “bring to front,” and “send to back”). It shows the arrangement of your images from front to back, with the top layer closest to the front.	
Locate the source selector (the “+” button in bottom right corner of each layer). This is where you’ll add your images sources. On the bottom layer, select your story’s background. You can save pictures to your camera roll that you take or that you find online and upload these to the app.	
On the middle layer, add your team’s green screen video.	
Select the “play” button. Locate the preview screen, which shows the combined image sources.	
Save this project to your camera roll using the “save” button next to the play button.	
To use picture-in-picture (PiP): the bottom layer of the project is your background. The middle layer is green screen video. The top layer can function as a PiP video. Select the video on the preview area and use a pinching motion to resize and place the video. Play the video and watch the preview area.	
Using this same video, select the PiP video on the timeline and trim the video down by clicking and dragging the layer. You can practice with moving, cutting, copying, pasting, and deleting as well.	
Locate the toolbar.	
Locate the crop tool. Crop out a part of your video. Select “play.”	

Task	Complete?
Locate the chroma tool (color circle). Select the green screen layer from the timeline. Select various colors and sensitivity. Try to make someone fade out.	
Select the green screen layer on the timeline. Select the mask tool on the right side of the toolbar. Using the rectangle, click and drag a rectangle over one person's head. Click "done." Play the video.	
Click on the mask again. Click the "X" at the top to get rid of the rectangle. Use the magic wand tool and select a character's shirt. Click "done" and play the video.	
Find your favorite image in the timeline and select "save image" to take a still shot and save it to your camera roll.
