Time Frame 45-60 session(s)

Essential Question(s)

How can educational technology fit into the classroom?

Summary

This short professional development activity allows participants to interact with G Suite and the Explore button and identify its use in the classroom.

Learning Goals

- Identify the parts of G Suite.
- Discover the uses of the Explore button.
- Analyze ways to use the Explore button in daily activities.

Attachments

- [Note Catcher—GoogleExplore.docx](#)
- [Note Catcher—GoogleExplore.pdf](#)
- [Presentation Slides—Google Explore.pptx](#)

Materials

- Presentation Slides
- Devices with Internet access
- Note Catcher (attached; optional; 1 per participant; may use digital notes instead)
- Sticky notes
- Pen or pencil

Engage

Presenter's Note: Setup

Prior to facilitating this professional development activity, make sure that participants have access to Google Chrome and G Suite on their device. This activity can be done with iPads; however, please be aware that the Explore button functionality is not as user-friendly as when accessed via laptop, Chromebook, or desktop. The TinyURL on **slide 2** will allow participants to force a copy of the digital Note Catcher, or you may choose to give them a paper copy.

Distance Learning Option

If this training takes place in a virtual setting, consider using the Pear Deck add-on in Google Slides to create and present synchronously with participants.

Begin by displaying **slide 4** and sharing the session's objectives with participants.

Go to **slide 5**. Ask participants to rate their level of knowledge with technology on a 1-10 scale. Ask participants to line up in numerical order based on their self-rating. Instruct participants to use the [Fold the Line](#) strategy. Once everyone has lined up, have one end of the line move to meet up with the other end. This will make sure that someone who is more comfortable with technology is paired with someone who is less comfortable. Ask new pairs to find a seat together.

Display **slide 6**. Once participants are seated, ask participants if they are familiar with the button on the slide. Then ask participants to identify the parts or apps of G Suite with which they are familiar. Take volunteers to explain.

Explain to participants that G Suite is a collection of applications that work together. Tell the participants that the parts of G Suite include:

- Docs
- Slides
- Sheets
- Forms
- Sites
- Gmail
- Drive
- Hangouts
- Meet
- Calendar

Explain that this activity will mainly focus on using the Explore button in Docs, Slides, and Sheets.

Explore

Presenter's Note: Timing

Each exploration below does not need to be very long or in-depth. Give participants just a few minutes to create each example. If time is limited, consider asking participants to find examples for Docs, Slides, and Sheets that they use in their Drive accounts already. You may also consider having participants use the Docs, Slides, and Sheets that are already created for use in this PD by inviting them to make a copy using the TinyURL links on the slides.

Guide participants through using Google Suite to create individual documents:

- Go to **slide 7**. Ask pairs to create a short Doc over a topic that they might cover with students. Then, invite participants to click the Explore button.
- Use **slide 8** to guide their exploration. Show participants that there are options available: Options are related to the topic that they chose to write about.
- Ask participants to drag and drop an item from their Explore button into their Doc. Mention that when an item, such as a picture from Google, is dragged and dropped into their example, the item has the source link automatically attached.
- Ask participants to check to make sure three options are available in their Explore button: Web, Images, and Drive.
- Have participants select the Web tab.
 - Ask participants to click the three dots and select a citation format: APA, Chicago, or MLA.
 - Next, have participants hover over the first web result in the panel until they see a quotation button.
 - Ask participants to click the button. By doing this, Explore will populate a footnote in their Doc with a citation in the format they previously selected.
 - They may also choose to change the citation style.
- Go to **slide 9**. Ask pairs to create a short Slides presentation over the same topic.
 - Then, invite participants to click the Explore button.
 - Use **slide 10** to guide their exploration.
 - Ask the participants to identify what they notice when the Explore panel opens in their screen.
 - Invite participants to run a search for something in their Drive or on the web.
 - Ask them to change the theme of the presentation.
 - Ask participants how using the Explore button in Slides could be helpful.
- Go to **slide 11**. Ask pairs to enter data in Sheets to use as a sample.
 - Remind participants to title their columns of data.
 - Invite participants to click the Explore button.
 - Use **slide 12** to guide their exploration.
 - Direct participants' attention to the panel, which has chart and graph options based on the data they provided.
 - Invite them to drag and drop a chart into the Sheets and then ask a question about their data in the side panel.

Presenter's Note: Additional Functions

If time allows, you may choose to also introduce participants to Forms and Keep **using slides 13-15.**

Explain

Display **slide 16**. Explain that the Explore button is a form of artificial intelligence.

- It works by "reading" the information that the user inputs into the application.
- Ask participants if they have any questions about G Suite and the Explore button.
- The slides include a few questions you may want to answer for participants, but they also allow participants to bring up anything else they are wondering about related to using G Suite and the Explore button.

Extend

Display **slide 17**. Continuing to work in pairs, ask participants to brainstorm a list of ways that they can use these options in the classroom with students. Give participants 5-7 minutes to develop their lists.

Once participants have finished their lists, ask for volunteers to share out their ideas.

Evaluate

Go to **slide 18**. Ask participants to use a sticky note to take part in a [3-2-1](#). On the sticky note, participants should identify...

- 3 things they learned in the activity
- 2 ways they plan on using the Explore button for their classrooms
- 1 question they have about the day's activities or G Suite/Explore

Technology Option

- Instead of 3-2-1, you may choose to have participants collaborate on a digital [I Used to Think... But Now I Know](#) to close the activity.
- If this is the case, go to <https://tinyurl.com/UsedButNow> in order to make a copy of an I Used to Think... But Now I Know Doc.
- Create a TinyURL of your own, and insert it on **slide 19** for participants to access.
- Remember, if you share the link attached in this note with participants, each participant will be creating his/her own copy, and the activity won't be collaborative.

Go to **slide 20** to recap the apps and strategies participants were introduced to today.

Thank participants for attending, and invite them to post their 3-2-1 sticky notes to a door or board as they exit.

Follow-up Activities

After reading through the sticky notes from the 3-2-1, consider using the questions participants had to create a short follow-up activity and address the possible answers or concerns.

Research Rationale

Students can now use Google Docs and the other Google Apps to collaborate on group projects because they can all write on one document or presentation at the same time. Normally, group work falls on one student or a few out of the group, but with Google Apps for Education (GAFE), students can sit separately and contribute simultaneously.

The teacher can also review the work of each student, further encouraging students to do their part during projects. Teachers can access student work at any given time to check for progress, provide feedback, and review or grade assignments. A case study done at KIPP Academy of Opportunity in Los Angeles, California, through Google in 2011 found that students were engaged in interactive learning and collaboration while using Google Apps. Teachers liked it because they could provide more resources at once and allow students to choose areas that best supported their work (Google, 2012).

Authentic lessons provide opportunities for collaboration, which, in turn, enables exploration of multiple perspectives and various points of view. Researchers have determined that "[a]uthentic learning environments need to provide collaborative learning where, for example, more able partners can assist with scaffolding and coaching, and where teachers provide appropriate learning support" (Herrington et al., 2014; Collins et al., 1989; Greenfield, 1984).

Herrington et al. (2006) describe the four components in an authentic lesson as follows:

1. Students should seek to solve a real-life problem to which they would attach emotional commitment as well as a cognitive interest;
2. The problem should be sufficiently open-ended, so that there are a variety of strategies for its solution;
3. The problem-solving strategies and "solutions" developed should encourage students to change their actions, beliefs, or attitudes;
4. The problem should have a real audience beyond the classroom.

Authentic tasks are more worthy of the investment of time and effort in higher education than de-contextualized exercises and tasks (Herrington & Herrington, 2006). GAFE does not replace the teacher, but it is a tool to help facilitate authenticity during instruction.
