Time Frame 50

Essential Question(s)

- How are students learning about careers?
- What community connections can you make to help engage students in careers?

Summary

In this profession learning session, participants explore careers in their communities by mapping local resources and designing career-focused activities based on career clusters. Participants will also identify how students gather information about careers and career opportunities. At the end of the lesson, participants will reflect on their learning and examine how they can enhance career exploration opportunities for their students.

Learning Goals

- Identify resources in your community to support student career needs.
- Design an activity around career clusters or a specific career.

Materials

- Presentation Slides (attached)
- Career Cards (attached; one page per 14 participants)
- Career Posters (attached; one set per session)
- Career KWL Chart handout (attached; one per participant)
- Community Ecosystem Model handout (attached; one per participant)
- Examining the Resources handout (attached; one per participant)
- Career Exploration Events handout (attached; one per group)
- Designing an Activity handout (attached; one per group)
- Sticky notes

5 minutes

Engage

Facilitator's Note: Preparation

Prior to the session, print the **Career Cards** and the **Career Posters**. Cut out the Career Cards and store them in an envelope or plastic bag. Hang the Career Posters around the room, evenly spaced.

Use the attached **Presentation Slides** to guide the session. Display **slide 2** and introduce the session to participants. Move through **slides 3–4** to share the essential questions and learning objectives.

Pass out one **Career Card** to each participant. Display **slide 5** and have each participant read their career card then stand next to the **Career Poster** that represents the career cluster their career card belongs to. Have each participant share the career on their card with others around the same poster.

Move to **slide 6** and have participants discuss the questions on the slide in their small career cluster groups. Once participants have had enough time to discuss, have them return to their seat, keeping their career card.

10 minutes

Explore

Pass out one copy of the **Career KWL Chart** handout to each participant. The handout is a modified version of the [KWHL Graphic Organizer](#) instructional strategy. Display **slide 7** and have participants consider the sections of the chart in the context of their school(s). Have them fill out the first two columns using what they know about their students. Assist participants in thinking about the types of careers their students would be interested in. Encourage them to use the Career Posters to guide their thinking.

Give each participant one copy of the **Community Ecosystem Model** handout. Display **slide 8**. Have participants use the questions on the slide to consider the resources available to students in their community. Display **slide 9** to show participants what they should write in their Community Ecosystem Models. Have participants fill in the circles on their handouts with different resources, adding on additional circles and drawing connecting lines between resources as needed.

20 minutes

Explain

Give each participant one copy of the **Examining the Resources** handout and one copy of the **Career Exploration Events** handout.

Move to **slide 10** and introduce the [Exclaim and Question](#) instructional strategy. Tell participants that they should review different career exploration resources and consider how these resources could be used in their schools. Have participants look at the [Career Café](#), [Zoom Into Your Career](#), and [College2Career Forum](#) Educator Resources in LEARN. As they read each one, have them record the purpose, something they like (exclaim), and something they have a question about for each resource on their Examining the Resources handouts.

20 minutes

Extend

Pass out one copy of the **Designing an Activity** handout to each participant. Transition to **slide 11** and explain that participants should work with others from their own schools to design an activity based on the career clusters discussed in the session. Have participants complete the handout by answering the questions and describing their activities in as much detail as possible.

10 minutes

Evaluate

Pass out a sticky note to each participant. Transition to **slide 12** and introduce participants to the [Aha! Huh? Uh uh.](#) instructional strategy. Direct participants' attention to their Career KWL Charts. Explain to participants that they should reflect on the session by writing one thing that stood out to them, one thing they still have questions about, and one thing they found troubling.

Research Rationale

Through continuous research, it is becoming increasingly evident that simply telling students about PSI opportunities or career fields isn't enough. Teachers need to give students impactful, relatable, and engaging experiences so that students can actively explore their options. Not only do these experiences help students explore future opportunities, but they can also lead to career success later in life. Research shows a strong correlation between job shadowing and workplace visits as a teen and career success later in life. One study found that Canadian students who made a workplace visit by age 15 were 4% less likely to be NEET (Not being in Education, Employment, or Training) than their peers at age 25 (Covacevich et al., 2021).

Secondary school is essential in developing a student's life, interests, future career, and educational trajectory. Students often use their personalities and interests to help form career decision-making skills throughout their lives, but these become more prominent in secondary education as students approach adulthood. Personality traits "influence career adaptation by facilitating, or deterring, behavioral performances" (Lent & Brown, 2013, p. 563). By connecting personality traits and interests, students begin to build self-efficacy in career decision-making as they are more confident in engaging in career exploration (Lent et al., 2016). This connection increases an individual's environmental fit and "level of congruence" within an organization (Zainudin et al., 2020, p. 884). One study of 4,834 secondary-aged students aimed to gauge the helpfulness of career talks in the students' schools (Kashefpakdel & Percy, 2017). The study showed that 2,660 students (55%) rated participation in career talks quite helpful, while 1,196 students (24.7%) rated the talk very helpful (Kashefpakdel & Percy, 2017).

Activities such as the College2Career Forum, Career Café, Zoom Into Your Career, and Career Expos assist students in determining if postsecondary education would be an appropriate avenue to achieve their goals and can lead to well-informed college and career choices. College offers students an opportunity to build relationships with mentors and peers that will benefit them throughout their careers (Campbell et al., 2012). College graduates tend to have more job satisfaction, jobs that offer a greater sense of accomplishment, more independence and opportunities for creativity, and more social interactions in their jobs than non-college graduates (Oreopoulos & Petronijevic, 2013). College graduates have an increased chance of employment. College helps students develop skills that prepare them for careers in the tech-driven economy, including non-routine, abstract skills that aid in problem-solving, multitasking, and creativity (Oreopoulos & Petronijevic, 2013).
