

INSTRUCTIONAL STRATEGIES

Color, Symbol, Image

This instructional strategy allows participants to explore a new concept without using written words or oral language.

LEARN.**K20**CENTER.OU.EDU/STRATEGIES

COLOR, SYMBOL, IMAGE

Summary

Color, Symbol, Image (CSI) is a strategy that allows students to explore a new concept creatively. After being introduced to a new concept, students choose a color, a symbol, and an image that represents this concept to them and then justify their thinking. This strategy can be used in a variety of ways to encourage metaphorical thinking and conceptual exploration of ideas as students connect new ideas to their prior knowledge.

Procedure

1. Introduce students to a new concept.
2. Students jot down what they already know about the concept.
3. Independently or in small groups, students then select a color, create a symbol, and draw an image that represents the concept and have them justify their choices.
4. Once their colors, symbols, and images are complete, students can share their CSI boards with the rest of the class (optional).
