

RESEARCH POSTERS

Summary

Students, after doing research or experiments, construct a meaningful poster to present their findings. Tips on how to design a meaningful, legible poster and examples of both well- and poorly-designed posters can be found at http://guides.nyu.edu/posters if examples are needed.

Procedure

- 1. First, students must conduct research or an experiment.
- 2. Then, students will create a poster that displays all of the components of the research or experiment.
- 3. Display the posters for the whole class to view.
- OPTIONAL: Provide opportunities for student feedback on posters. The Gallery Walk/Carousel strategy, and its variations, work well for this.
