NOTEBOOKLM

Summary

NotebookLM is an AI-powered experimental research and note-taking tool developed by Google, designed to help users organize and synthesize information from their uploaded documents. It allows users to ask questions, generate summaries, and gain insights from their materials, making research and learning more efficient. NotebookLM helps users connect ideas, clarify complex topics, and streamline their workflow.

Procedure

1. Navigate to [NotebookLM](https://notebooklm.google.com/).
2. Log in using a Google account.
3. Create a new notebook by selecting "Create" on the landing page.
4. In the *Sources* box, select "Add source" and upload up to 50 sources, including PDFs, audio files, Word or Google Docs, website links, pasted text, and more.
5. A synopsis of the sources will be generated in the *Chat* box. From there, you can type questions and receive answers using your source as the guide.
6. In the *Studio* box, you can generate a podcast conversation using the uploaded information. By selecting "Customize," you can input details from the sources that you want the AI hosts to focus on. When you are ready to hear the conversation, select "Generate" and push the play button.
7. Take notes of the information by selecting "Add note" in the *Notes* box. There are also options to create a study guide, briefing doc, FAQ note, and a timeline.

Google. (2024). NotebookLM (built with Gemini 2.0). [Large language model]. NotebookLM.
