TECH TOOLS

SORT (System for Organizing Randomized Teams)

SORT is a quick and easy way to divide up your class or audience into groups or “teams.” It is fast, free, and does not even require signing up. Just enter the number of groups you want and click a button!

LEARN.K20CENTER.OU.EDU/STRATEGIES

SORT (SYSTEM FOR ORGANIZING RANDOMIZED TEAMS)

Summary

SORT is a web application that allows educators and presenters to quickly divide a class or audience into groups. Simply enter the number of groups you need and click a button to generate a QR code and link. Participants can scan the code or visit the link to be automatically assigned to a group. If desired, groups can be customized by setting specific names and colors.

Procedure

1. Go to sort.k20center.ou.edu/.
2. Next to “Count,” enter the number of groups you want to create. You may also customize group names, colors, and descriptions.
3. Select the **SORT** button.
4. Ask learners to scan the generated QR code or go to the displayed URL.
5. Once learners join, they will be automatically assigned to a group and shown a color-coded card with their group name. Instruct them to use that card to find the other members of their group.

To save the grouping page for later use, select **Save SORT for Later** to copy the URL. To create new groups, select **Restart**.
